

Operation

The 460187 Poult Winch is designed to attach to any ribbed or smooth 1.75" OD feed tube. This winch is designed to actuate the feed level cone on the Turkey Poult Pan.

FIGURE 1

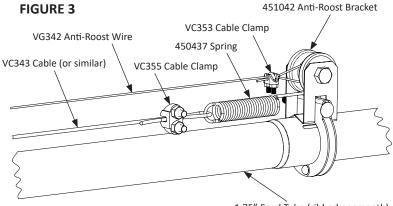

Installation of the Winch Adjustable Feed Level Tube System

Step 1: The winch should be placed in the center of the line of feed level tubes it will adjust, as shown in Figure 1. FIGURE 2 Use four 451040 clamps (provided) to fasten the winch to 460070 Winch the feeder line tube, as shown in Figure 2. VG342 Anti-Roost Wire **NOTE:** The line length must *NOT* exceed 200 feet (61m). - Connan (if equipped) 010253 Washer 460186 Anti-Roost Bracket 010669 Bolt 011115 Nut VC343 Cable (or similar) đ \bigcirc \bigcirc 0 O 0 0 1.75" Feed Tube (ribbed or smooth) 451040 Feeder Tube Clamp

Step 2: Route the cable through the holes in the winch drum. Turn the winch handle clockwise a minumum of two revolutions to wind some cable onto the winch drum.

Step 3: Attach spring to anti-roost bracket on each side of the winch, as shown in Figure 3. Attach the bracket/spring assemblies to the feeder line tube at a maximum distance of 100 feet (30m) from the winch.

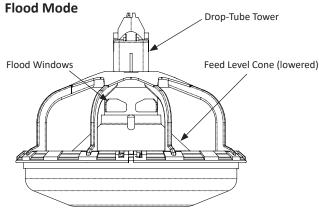

1.75" Feed Tube (ribbed or smooth)

Setting Pans

460350 High Flood Pan

When flood mode is desired, the cone should be in the lowest position, allowing the feed to flow out of the high flood windows and completely fill the feed pan. When flood mode is not desired, the feed cone should be winched up to cover the flood windows in the drop-tube tower.

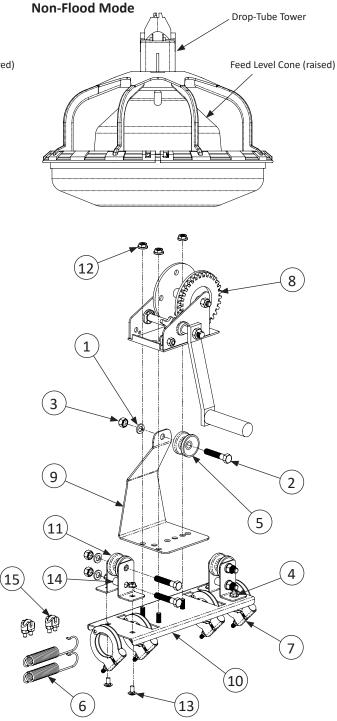

460200

460200 pan does not have flood windows in the tower. For this pan, flood mode setting is when the cone is raised and non-flood mode is when the cone is lowered.
